# OSMO - THERM 21

HEAT, COLD AND CURRENT FOR OPTIMAL RESULTS

Osmo Therm 21 utilizes the properties of heat and cold as well as two programs with electric power to combat cellulite, excess local fat and sagging skin while giving the client a sense of well-being, freshness and vitality.

## HEAT AND COLD GIVE THERMAL EFFECT

- Face lift and figure shaping
- Removal of wrinkles, double chin, unwanted fat and «countess arms»
- Anti-inflammatory effect; reduces muscle pain and tendonitis
- Increases metabolism and fat burning
- Increases blood flow in microcirculation
- Removes fluid retention and stimulates lymph drainage
- All treatments are painless, completely safe, CE-approved and without side effects

1 FIRMING AND 2 FAT REMOVAL TREATMENTS

# OSMO - THERM <sup>21</sup> COLD, HEAT AND ELECTRICITY TREATMENT IS A NEW AND REVOLUTIONARY METHOD THAT PROVIDES IMMEDIATE AND PERMANENT EFFECT!

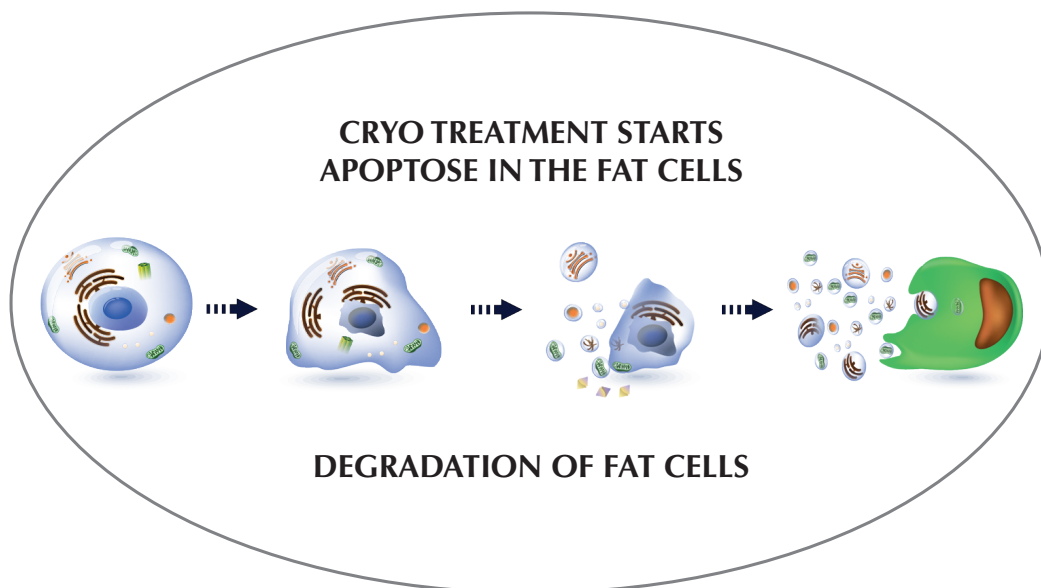

Osmo Therm cold, heat and electricity treatment is now finally in Norway. A new and more advanced version of Cryo 21. The Karolinska Institute in Stockholm has researched cold treatment (Cryotherapy) of fat cells. Their studies show that adding "white fat" to the cold will promote the growth of blood vessels that convert white fat into brown fat. The brown fat is much easier for the body to burn. The cold treatment (Cryotherapy) is CE approved and is completely safe and harmless without any kind of side effects. The treatment only feels like a pleasant cool massage.

Our method is completely different from other cryo methods as our refrigeration probe is moved manually in the places where you want to remove grease and there is no long waiting time before you see the result.

## ADVANCED TECHNOLOGY

Our method is simply ingenious in that we can treat anywhere on the body: Remove countless arms, double chin, belly fat and cellulite. Osmo Therm is a therapeutic treatment for the removal of fat without surgery. Osmo Therm creates a thermal shock by reducing the temperature in the fat cells. This process is called apoptosis which results in a gradual degeneration and elimination of dead fat cells.

This is done by the machine reducing the temperature in the range from 34°C to only 8°C and this without the customer feeling any kind of cold. After 6 treatments, it is common for the customer to have lost many cm around the waist and several sizes and that completely without any kind of surgery.

## THE COMBINATION OF COLD, HEAT AND POWER

This treatment, with its extraordinary lifting effect, counteracts sagging skin on the face and body. By raising and lowering the temperature of the connective tissue and activating the fibroblasts to produce new collagen and elastin, there is a natural tissue compression and tension effect.

## TWO CURRENT PROGRAMS

Microcurrents stimulate the processes to reduce edema by drawing water from the deepest layers of the hypodermis. Increases the production of fibroblasts, which are fundamental cells for the production of collagen, elastin and hyaluronic acid.

Thanks to special waveforms are induced the opening of electro-sensitive ducts, called hydrophilic macropores ("the current fence in the skin"), increases the permeability of the skin surface. All the products in the series are microionized, which means that the active ingredients can

flow more easily through the "power fence". This phenomenon means that the active ingredients, specially produced for this type of treatment, found in the products in the cosmetic series Linea 21 and 21mila, work in depth.

3 BELLY TREATMENTS

- Reduction of fat cells
- Reduction of cellulite
- Detoxification
- Reduction of swelling and edema
- Better compactness of the skin
- Exceptionally effective as an anti-aging treatment, able to reduce wrinkles, moisturize and tighten the skin of the face and neck
- Increased elasticity in tissues
- Microcirculation stimulation
- Reoxygenation of skin

## COURSES AND SEMINAR ACTIVITIES

Dui Clinique AS conducts continuous courses so that you learn to use the device in a professional way. Here we consider both the process itself using Osmo Therm and a basic introduction to the theory behind this successful concept.

It is important that everyone who is to work with the device also knows what is happening in the bodies of the customers during treatment.

This is to establish security with the customer. It is also important to learn how to handle a sales situation and take part in our marketing strategies with flyers, brochures, local ads, posters etc.

Our Beauty Boss Business School holds online courses and seminars. Come and try the machines yourself, either at one of our seminars or in our premises in Tønsberg.

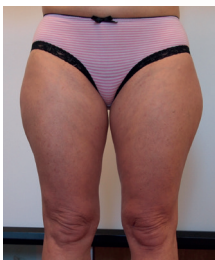

BEFORE

AFTER

Countess arms - Result after 1 treatment

Fat removal - Result after 6 treatments

## OSMO THERM REMOVES FAT WITHOUT SURGERY - LOSE SIZES WITH ONLY 6 TREATMENTS!

The *Osmo Therm* treatment takes 20-30 minutes. The therapist treats the same place once every 14 days, as it takes approx. 2 weeks before all the dead fat cells are excreted from the body. After 6 treatments, the desired result is usually achieved. If the customer has both belly fat, countess arms and double chin, these can be treated independently of each other.

*Osmo Therm* treatment can remove tension in muscles as well as symptoms from trauma after injuries. Furthermore, it can help skin and health therapists remove unwanted fat and wrinkles on the face as well as double chin.

*Osmo Therm* is designed to also help masseurs, hair-dressers, physiotherapists, chiropractors and other health personnel as well as dermatologists and health therapists. It has an anti-inflammatory effect; it reduces muscle and tendon inflammation and muscle soreness due to accumulation of lactic acid in the muscles.

### PAIN TREATMENT

Tennis elbow

Sore neck and shoulders
